Team 4 - **First Movers**

Project Name

ABSTRACT

The Purpose of our project "P Name" is to automate the process of getting medical treatment and health check-ups in a way that both saves time and effort. Patients can search and book doctor's appointments easily based on their location, availability, and specialty. Also, hospitals can manage their doctor's and patients' records.

Our system can aware about various government policies and health care benefits. As this is a centralized hospital management system so one patient's history can be viewed by other hospital doctors so it creates a good & easy environment for medical treatment. We build a chatbot as the first step of consultation where our chatbot will suggest or assist you with a doctor or hospital based on your symptoms.

One important point is that our system does not provide a home visit feature and online consultation yet but we can consider it for the future scope**.**
